

Below are a few areas of science that you will find in our Science Fair.

Draw lines to match them.

NAME: _____

• **States of Matter:** Liquids, gases, and solids can change in surprising ways when we combine them! These are called chemical or physical reactions. (Chemistry)

• **Life on Earth:** We learn about the different kinds of life on Earth and how the Earth supports life. (Botany, Biology, Zoology, Geology)

• **Natural Forces:** Gravity, magnetism, momentum, pressure, and other forces affect our daily lives. (Physics)

• **Machines:** Simple machines can be put together to make more complicated ones like this Rube Goldberg machine. (Mechanical Engineering)

• **Cells:** The building blocks of living things, and the smallest forms of life. They can be very good, or very bad! (Cellular Biology)

• **Electricity:** Electrons travel along circuits made from conductors and power sources. Circuits are everywhere! (Electrical Engineering)
